1 Report Information

Cisco Meeting Server carries on-premises audio, video and web communication. It works with third-party devices and can be integrated with Cisco Communications Manager for ad hoc video meetings.

Participants can join the meeting via Cisco or third-party video endpoints, a Cisco Jabber client, Cisco Meeting App, either native or via a WebRTC-compatible browser, or Skype for Business to participate in the meeting.

Cisco Meeting Server, Cisco Meeting App, and Cisco Meeting Management have been optimized to be installed with Cisco Unified Communications Manager, Cisco Expressway or Video Communication Server (VCS) for call control, Cisco Expressway for firewall traversal, and Cisco TelePresence Management Suite for scheduling.

Most configurations of the Cisco Meeting Server are performed through the CMS API via XML requests. The CMS also includes a Web Admin with limited configuration options that include:

- General Configuration
- Active Directory Configuration for one main LDAP server. Multiple servers need to be configured via the API
- Call Settings
- Incoming and Outgoing Call setup with Rules and Dial Transforms
- CDR Configuration
- Spaces, also refered to in the API as CoSpaces
- CMA user setting to allow/disallow incoming calls

1.1 Report Generation

This configuration report for Cisco Meeting Server has the following details:

Report Info	
Report Date	15-Mar-21 10:28:46 AM
Report generated for	Cisco CMS Config Report
Description	As-Built Documentation for project - Sample CMS v3.1
Server Info	
CMS version	3.1.2
CMS IP	10.5.1.131
Report Settings	
Report Type	Direct Report
Visual Style	Blu Light.css
Report Content	All objects
Template HTML	CMSreportTemplate.htm
Template Word	Gears-Blue-universal.doc
Report Tool Info	
Report Tool Version	12.0.29 / ?? Mar 2021
Report Tool License	Licensed [Ent all]

2 Status

This section contains:

- General status
- Licensing

2.1 General Status

The following table shows the system status.

System Status	
Uptime	2 days, 13 hours, 14 minutes
Build version	3.1.2
Media module status	1/1 (full media capacity)

Lync Edge registrations	4 configured, 4 in progress
web app calls	0
SIP calls	0
Lync calls	0
Forwarded calls	0
Completed calls	0
Activated conferences	1
Active Lync subscribers	0
Total outgoing media bandwidth	0
Total incoming media bandwidth	0

2.2 Licensing

You will need activation keys and licenses for the Cisco Meeting Server and Cisco user licenses. From CMS version 3.0 onwards, a GET operation on the existing /system/licensing API now only returns the contents of the license file (i.e. the feature components) on a per Meeting Server instance.

The following activation keys or licenses are required to use the Cisco Meeting Server:

- Call Bridge
- Branding
- Recording
- Streaming

The following licenses are present:

Licensing	
Call Bridge	noLicense
Call Bridge No Encryption	noLicense
Web Bridge	noLicense
Customizations	noLicense
Turn	noLicense
Branding	noLicense
Recording	noLicense
Streaming	noLicense
Personal	noLicense
Shared	noLicense
Capacity Units	noLicense
Multiparty Licensing	
Timestamp	2021-03-15T09:24:45Z
Personal License Limit	0
Shared License Limit	0
Capacity Unit Limit	0
Users	258
Personal Licenses	0
Participants Active	0
Calls Active	0
Weighted Calls Active	0.000
Calls Without Personal License	0
Weighted Calls Without Personal License	0.000
Capacity Unit Usage	0.000
Capacity Unit Usage Without Personal License	0.000
Active Personal Licenses	
Active Personal Licenses	

2.3 Cluster Licensing

The newly introduced API object /clusterLicensing returns the license status and expiry date (if applicable) for a Meeting Server cluster.

The following activation keys or licenses are required on this Meeting Server cluster:

- Call Bridge
- Branding
- Recording
- Streaming

The following licenses are present:

Cluster Licensing	
Call Bridge	noLicense
Call Bridge No Encryption	noLicense
Customizations	noLicense
Recording	noLicense

3 System

The System section contains the following configuration items:

- General Configuration
- Cluster Settings
- Database Settings
- TURN Servers
- Web Bridges (CMS 3.0 and later)
- Recorders (only CMS version 2.x)
- Streamers (only CMS version 2.x)
- XMPP Settings (only CMS version 2.x)
- CDR Receivers

3.1 General Configuration

The menu *Configuration* > *General* of the Web Admin interface on the Meeting Server shows a summarized collection of General Configuration settings.

General Configuration	
TURN Server settings	
TURN Server address (CMS)	10.5.1.1
TURN Server address (web app)	10.5.1.1
Username	admin
Lync Edge settings	
Server address	10.5.1.166
Username	admin
Number of registrations	4
IVR	
IVR numeric ID	3
Joining scheduled Lync conferences by ID	enabled

3.2 Cluster Settings

This Call Bridge node has the following settings:

Cluster Settings	
Unique Name	
Peer Link Bit Rate	5000
Max Peer Video Streams	
Participant Limit	2000

Load Limit	50
New Conference Load Limit Basis Points	5000
Existing Conference Load Limit Basis Points	8000

3.3 Database Settings

The Call Bridge reads from and writes to the database storing the space and configuration information. Database clustering can be disabled or enabled across cluster nodes. If enabled, it contains total nodes and the master name is in the 'Node-In-Use' setting.

<database clustered="disabled"></database>

3.4 TURN Servers

The TURN server provides firewall traversal technology, allowing the Meeting Server to be deployed behind a Firewall or NAT. To connect to the deployment from external Cisco Meeting Apps, Lync clients or SIP endpoints registered to a SIP or voice call control device, you need to enable the TURN server.

Note: Cisco plans to remove the TURN server component from the Cisco Meeting Server software in a future version.

The following TURN Servers are configured:

TURN Servers

ID	Details	
589ddfe3-b0ff-4c1d-85b1-4812b00e6217	Server Address	10.5.1.1
	Client Address	
	Num Registrations	0
	Username	
	Use Short Term Credentials	false
	Type	cms
	Call Bridge	callBridges1 [da4004d7-9a3c-497d-8169-68d758ee41c8]
70be2794-dcce-4507-af36-aa8b4ebbfde3	Server Address	10.5.1.1
	Client Address	10.5.1.100
	Num Registrations	45
	Username	admin
	Use Short Term Credentials	false
	Type	standard
	Call Bridge	callBridges1 [da4004d7-9a3c-497d-8169-68d758ee41c8]

3.5 Web Bridges

The Web Bridge is required for Cisco Meeting Apps to look up guest login when using a web browser that does not support WebRTC (for example Internet Explorer). The Web Bridge is used by the WebRTC app. If you are deploying the WebRTC app you need to set the network interface for the Web Bridge and then enable it.

The following Web Bridge elements can be rebranded via the API:

- Sign-in background image for WebRTC app
- Sign-in logo
- Text below sign-in logo
- Text on browser tab

Web Bridges

ID	Details	
eb56526f-e48f-4673-a55f-cc6fccddfee6	Url	http://webBridges.com/webBridges.asp
	Tenant	tenant1 [e135fe4a-f019-42b4-a114-9e06e763d328]
	Web Bridge Profile	webBridgeProfiles1 [54d7c9e9-8b89-461f-90b9-3cfbfc16dd9a]

3.6 CDR Receivers

The Meeting Server generates Call Detail Records (CDRs) internally for key call-related events, such as a new SIP connection arriving at the server, or a call being activated or deactivated. It can be configured to send these CDRs to a remote system to be collected and analyzed.

There is no persistent storage of CDRs on Meeting Servers; CDRs are temporarily buffered on the Meeting Server before being streamed to the CDR storage receiver. When they have been sent to the CDR receiver, CDRs are removed from the Meeting Server. The Meeting Server supports up to 4 CDR receivers.

The following CDR receivers are configured:

CDR Receivers	
Cdr Receiver	http:/10.5.1.1/cdr.asxp

4 Directory

The Directory section contains the following configuration items:

- Active Directory Configuration (from admin web page)
- Directory Search Locations
- LDAP - Multiple LDAP servers can be configured via the API. These LDAP settings are shown here.
- LDAP Servers
- LDAP Mappings
- LDAP Sources
- LDAP Syncs

4.1 Active Directory

For users to utilize the Cisco Meeting Apps to connect to the Meeting Server, an LDAP server (currently Microsoft Active Directory or OpenLDAP) must be configured. The Meeting Server imports the User accounts from the LDAP server.

The server uses the concept of filters, rules, and templates, which allow you to separate users into groups.

The Web Admin interface on the Meeting Server can only configure one single LDAP server as shown below. However, the Meeting Server supports multiple LDAP servers which can be configured via the API. Those are listed in the following section LDAP.

Active Directory	
Active Directory Server Settings	
Address	10.5.1.166
Port	389
Secure connection	false
Username	CN=Administrator,CN=Users,DC=lab,DC=test
Corporate Directory Settings	
Restrict search to searcher OU	true
Import Settings	
Base distinguished name	DC=lab,DC=test
Filter	(sAMAccountName=*)
Field Mapping Expressions	
Display name	cn
Username	$sAMAccountName$@lab.test
Space name	$sAMAccountName$.space
Space URI user part	
Space secondary URI user part	
Space call ID	88$telephoneNumber$

4.2 Directory Search Locations

This section shows additional external directory search locations that the Call Bridge will consult when users of Cisco Meeting Apps perform searches.

Directory Search Locations		
ID	**Details**	
54d885d1-a4a6-407c-9a78-69878e1ad8cd	Ldap Server	AD2013 [5f1531e9-3db7-4ea2-98db-07ccd9b9765c]
	Base Dn	
	Filter Format	
	Priority	3
	Label	
	Tenant	tenant1 [e135fe4a-f019-42b4-a114-9e06e763d328]
	First Name	first
	Last Name	last
	Display Name

	Mobile	
	Email	
	Sip	
	Organisation	
6a4502e4-9256-4b3c-bb52-227cdbfee5d8	Ldap Server	AD2013 [5f1531e9-3db7-4ea2-98db-07ccd9b9765c]
	Base Dn	ou=lab,ou=test
	Filter Format	
	Priority	1
	Label	
	Tenant	tenant1 [e135fe4a-f019-42b4-a114-9e06e763d328]
	First Name	
	Last Name	
	Display Name	
	Phone	
	Mobile	
	Email	
	Sip	
	Organisation	

4.3 LDAP

The LDAP configuration items relate to the Meeting Server's interaction with one or more LDAP servers (for instance, Active Directory), used to import user accounts to the Meeting Server. Multiple LDAP servers can only be configured via the API. These LDAP settings are shown here. This section contains:

- LDAP Servers
- LDAP Mappings
- LDAP Sources
- LDAP Syncs

4.3.1 LDAP Servers

One or more LDAP servers should be configured, with each one having associated username and password information for the Meeting Server to use to connect to it, for the purpose of retrieving user account information.

The passwords are not cached on the Meeting Server, a call is made to the LDAP server when a Cisco Meeting App authenticates, and therefore passwords are managed centrally and securely on the LDAP server.

LDAP Servers		
ID	**Details**	
5f1531e9-3db7-4ea2-98db-07ccd9b9765c	Address	10.5.1.166
	Name	AD2013
	Username	
	Port Number	389

LDAP Servers		
ID	**Details**	
	Secure	false

4.3.2 LDAP Mappings

LDAP mappings define the form of the user account names which will be added to the system when users are imported from configured LDAP.

The following LDAP mappings are configured:

LDAP Mappings		
ID	**Details**	
7543e157-7dca-4206-9172-700bbfeae1d8	Jid Mapping	
	Name Mapping	cn
	Cdr Tag Mapping	
	Co Space Name Mapping	
	Co Space Uri Mapping	
	Co Space Secondary Uri Mapping	
	Co Space Call Id Mapping	
	Authentication Id Mapping	

4.3.3 LDAP Sources

LDAP Sources tie together configured LDAP servers and LDAP mappings, along with parameters of its own, which correspond to the actual import of a set of users. An LDAP source takes an LDAP server and an LDAP mapping combination and imports a filtered set of users from that LDAP server. This filter is determined by the LDAP source's "baseDn" (the node of the LDAP server's tree under which the users can be found) and a filter to ensure that user accounts are only created for LDAP objects that match a specific pattern.

The following LDAP Sources are configured:

LDAP Sources		
ID	**Details**	
7e1775e7-1e01-4785-bd7c-826e42478e68	Name	ldapSources1
	Server	AD2013 [5f1531e9-3db7-4ea2-98db-07ccd9b9765c]
	Mapping	7543e157-7dca-4206-9172-700bbfeae1d8
	Tenant	tenant1 [e135fe4a-f019-42b4-a114-9e06e763d328]
	Base Dn	dc=lab,dc=test
	Filter	
	User Profile	eb702b80-ad3a-4b0c-b482-d17665b34b33
	Non Member Access	true

4.3.4 LDAP Syncs

The following LDAP Syncs are pending or in-progress:

LDAP Syncs		
ID	**Details**	
20679fc9-41a3-410f-9401-a5651b1d3558	State	failed
	Failure Reason	ldapError
	Creation Time	2021-03-15T09:24:30Z
	Start Time	2021-03-15T09:24:30Z
	End Time	2021-03-15T09:24:30Z

5 Profiles

This chapter lists the Profiles. They include:

- Call Branding Profiles
- DTMF Profiles
- Call Profiles
- Call Leg Profiles
- Compatibility Profiles
- IVR Branding Profiles
- Dial-in Security Profiles (starting in CMS version 3.0)
- Web Bridge Profiles (starting in CMS version 3.0)

5.1 Call Branding Profiles

Call branding profiles can define the experience when dialing into a scheduled conference.

To customize the language, the language files by Cisco were used and made available to the CMS via the IIS web server at the specified domain. The same applies to the customized background picture. At the TMS you will find this directory under C:\inetpub\wwwroot\Branding-CMS.If you want to change these files, you can do this in this directory without having to adjust the configuration of the CMS. For more details, please see the Customization Guidelines by Cisco.

The following Interactive Call Branding Profiles are configured:

Call Branding Profiles	
ID	**Details**
5b61c44f-8045-4632-87b5-d2b648a03dde	Resource Location: http://www.lab.test/image.png Invitation Template: http://www.lab.test/invitationTemplate.html
d328bdc8-0486-492a-9c33-9a3ac340857d	Resource Location: http://www.lab.test/img.png Invitation Template: http://www.lab.test/invitationTemplate.html

5.2 DTMF Profiles

DTMF Profiles can be used to define DTMF sequences that can be used to control audio. The DTMF Profile does not define the ability to perform the actions, it defines the DTMF string that will invoke action. The definition for who has the authority to invoke that action within the coSpace is defined at the callLegProfile level.

The following DTMF Profiles are configured:

DTMF Profiles	
ID	**Details**
2c244f81-92a5-48c6-824e-ec5dcaa1ca6b	Mute Self Audio: ## Unmute Self Audio: Toggle Mute Self Audio: Lock Call: Unlock Call: Mute All Except Self Audio: # Unmute All Except Self Audio: # End Call: @ Next Layout: * Previous Layout: Start Recording: Stop Recording: Start Streaming: Stop Streaming: Allow All Mute Self: Cancel Allow All Mute Self: Allow All Presentation Contribution:

DTMF Profiles	
ID	**Details**
	Cancel Allow All Presentation Contribution Mute All New Audio Unmute All New Audio Default Mute All New Audio Mute All New And All Except Self Audio Unmute All New And All Except Self Audio Get Total Participant Count
60f48b13-7067-4068-a704-4451b0584e38	Mute Self Audio Unmute Self Audio Toggle Mute Self Audio Lock Call Unlock Call Mute All Except Self Audio Unmute All Except Self Audio End Call Next Layout Previous Layout Start Recording Stop Recording Start Streaming Stop Streaming Allow All Mute Self Cancel Allow All Mute Self Allow All Presentation Contribution Cancel Allow All Presentation Contribution Mute All New Audio Unmute All New Audio Default Mute All New Audio Mute All New And All Except Self Audio Unmute All New And All Except Self Audio Get Total Participant Count

5.3 Call Profiles

Call Profiles control the maximum number of active simultaneous participants and the in-call experience for SIP calls. Call Profiles can be attached at the system, tenant or coSpace level, with the most specific taking effect.

The following Call Profiles are present:

Call Profiles		
ID	**Details**	
0149a5a5-515b-434f-a863-d535c7755e4c	Participant Limit	5
	Locked	false
	Recording Mode	manual

5.4 Call Leg Profiles

A Call Leg Profile defines a set of in-call behaviors. A call leg is a logical connection; a voice call compromises two call legs. The values in the Call Leg Profile set for a coSpace would be used for call legs in that coSpace, overriding any

values set in the Call Leg Profile specified for the tenant that the coSpace is associated with. CoSpace, coSpaceUser, accessMethod, and tenant objects can optionally have a Call Leg Profile association.

The following Call Leg Profiles are present:

Call Leg Profiles	
ID	**Details**
08b4743b-f10a-4eb0-bf37-a5906b36df04	Needs Activation: Default Layout: speakerOnly Presentation Display Mode: Mute Self Allowed: End Call Allowed: false Set Importance Allowed:
92c7032e-f40d-4a5e-9d96-4cbe7c296595	Needs Activation: Default Layout: Presentation Display Mode: Mute Self Allowed: End Call Allowed: Set Importance Allowed:
efcb6899-f57e-42f4-97b4-a9306510a78c	Needs Activation: false Default Layout: speakerOnly Presentation Display Mode: dualStream Mute Self Allowed: true End Call Allowed: false Set Importance Allowed: false

5.5 Compatibility Profiles

Compatibility Profiles contain compatibility settings for SIP calls including:

- SIP UDT
- SIP Multistream
- SIP Media Payload Type
- Chrome Web RTC Video Codec
- h.264 CHP Mode

Compatibility Profiles	
ID	**Details**
0e40d076-b64f-4692-8e3e-e2106c70d986	Sip Udt: Sip Media Payload Type Mode: Chrome Web Rtc H264interop Mode: Distribution Link Media Traversal:

ef2abdda-95c5-4860-ba31-18d402a67b42	Sip Udt: Sip Media Payload Type Mode: Chrome Web Rtc H264interop Mode: Distribution Link Media Traversal:
f32b1b24-8d4f-406e-8dbb-9f0b159e1725	Sip Udt: true Sip Media Payload Type Mode: auto Chrome Web Rtc H264interop Mode: auto Distribution Link Media Traversal: enabled

5.6 IVR Branding Profiles

IVR branding profiles can define the experience when dialing into an IVR. An Interactive Voice Response (IVR) Branding Profile is assigned to a tenant.

The following Interactive Voice Response (IVR) Branding Profiles are configured:

IVR Branding Profiles	
ID	**Resource Location**
358fdf4e-d244-428e-93ac-d52a0a425eb5	http://ivrBrandingProfiles.lab.test
4efb066f-c2f2-4f0d-93a9-da78962f391b	http://ivrBrandingProfiles2.lab.test

5.7 Dial-in Security Profiles

Dial-in Security Profiles (starting in CMS version 3.0) allow to define password parameters and are used to implement a minimum passcode length. The parameters of a Dial-in Security Profile are name, minPasscodeLength and allowOutOfPolicy. If these parameters are not specified at any level, the default settings will be minPasscodeLength=0 and allowOutOfPolicy=true.

After defining an Dial-in Security Profile, it can then be assigned to a tenant, coSpace or coSpace template, access method template or it can be set as top level (global) dial-in security profile. The default setting of thse config items in the parameter dialInSecurityProfiles is 'unset'.

The following Dial-in Security Profiles are configured:

Dial-in Security Profiles	
ID	**Details**
3fff1ea9-4b4a-459f-bd2b-88aebb43248e	Name: DSP-1 Min Passcode Length: 6 Allow Out Of Policy:
6d358e8c-938c-45cd-a248-fc4e4922a6a6	Name: DSP-2 Min Passcode Length: 5 Allow Out Of Policy: true

5.8 Web Bridge Profiles

Web Bridge Profiles (starting in CMS version 3.0) allow to apply the same settings for all, or a specified group of Web Bridges, not just on a per Web Bridge basis. After defining a Web Bridge Profile, it can then be assigned to a tenant or globally to the system profile. The new API parameter /system/profiles/webBridgeProfile allows you to specify and set the top level (global) web bridge profile.

The following Web Bridge Profiles are configured:

Web Bridge Profiles	
ID	**Details**
1032b8f4-91da-4b01-8ba4-f6f82d6255f5	Name: webBridgeProfiles2 Allow Passcodes: true Allow Secrets: true Resolve Co Space Uris: off
54d7c9e9-8b89-461f-90b9-3cfbfc16dd9a	Name: webBridgeProfiles1 Allow Passcodes: Allow Secrets: true Resolve Co Space Uris:

6 Users

The section Users contains:

- User Profiles
- CMA User Settings

- Users

6.1 User Profiles

User profiles control the facilities provided to the users in the profile, for instance whether they can create new spaces, create new calls, make phone calls, slave SIP endpoints or be allowed to send and receive chat messages when in a point to point call with another user.

User Profiles	
ID	**Details**
eb702b80-ad3a-4b0c-b482-d17665b34b33	Audio Participation Allowed: true Presentation Participation Allowed: true Has License: true

6.2 Users

If you plan for users to utilize the Cisco Meeting Apps to connect to the Meeting Server, then you must have an LDAP server. User accounts are imported from the LDAP server. You can create usernames by importing fields from LDAP as described in LDAP configuration. The passwords are not cached on the Meeting Server, they are managed centrally and securely on the LDAP server. When a Cisco Meeting App authenticates, a call is made to the LDAP server.

Multi-tenancy means that groups of users can be entirely segmented within the solution as required by service provider deployments e.g. users will only be able to meet, assign users to spaces, and search in the directory within the same configured customer groups.

The following users have been imported:

Users				
ID	**User Jid**	**Name**	**Email**	**coSpaces**
fdc474a0-7d31-4e67-8fd3-bcec33b2c10f	1300.ORANGE@lab.test	1300 ORANGE	1300ORANGE@lab.test	1300.ORANGE.space [cac08fa8-ee99-417f-88d7-4744688614c2]

7 Tenants and Tenant Groups

The Meeting Server supports multi-tenancy; this refers to sub-dividing its capacity into a set of islands where each island has all of the functionality of the unit as a whole, but has no access to the resources (for instance users, coSpaces, or active calls) of other tenants. This section contains:

- Tenants
- Tenant Groups

7.1 Tenants

The Meeting Server supports multi-tenancy; this refers to sub-dividing its capacity into a set of islands where each island has all of the functionality of the unit as a whole, but has no access to the resources (for instance users, spaces, or active calls) of other tenants.

The following tenants are configured:

Tenants	
ID	**Details**
e135fe4a-f019-42b4-a114-9e06e763d328	Name: tenant1 Dial In Security Profile: DSP-1 [3fff1ea9-4b4a-459f-bd2b-88aebb43248e] Web Bridge Profile: webBridgeProfiles2 [1032b8f4-91da-4b01-8ba4-f6f82d6255f5] Participant Limit: 3

7.2 Tenant Groups

Multi-tenancy is supported where multiple deployments can be hosted on the same server. This feature is provided by assigning tenants to a tenant group. This provides a mechanism for splitting tenants into separate independent groups. Each group consists of one or more tenants.

- IVRs and web bridges can now be created for a group of tenants as well as for an individual tenant.
- Tenanted dial plans, to enable the outgoing dial plan to have rules set that are tenant specific. Outbound connections can have tenant specific 'Local From Domain' to allow call back to reach the correct tenant.
- Tenanted call IDs. Call IDs must be unique within a tenant group, but maybe reused for different tenant groups.
- XMPP multi-domains. XMPP multi-domains enables a single Cisco Meeting Server to host multiple XMPP domains.

8 Spaces

Spaces are meeting spaces that are created by users, the API or through CMS Admin. Once a Space is created, users can be invited to join the meeting in that Cisco Meeting Server space. In the API they are referred to as coSpaces.

The following Spaces are configured:

Spaces

9 Calls

The Calls section contains the following configuration items:

- Call Bridges
- Call Bridges Groups
- Call Settings
- Chapter Incoming Calls
- Chapter Outgoing Calls
- IVRs

9.1 Call Bridges

The Call Bridge is the component on the Meeting Server that bridges the conference connections, enabling multiple participants to join meetings hosted on the Meeting Server or Lync AVMCUs. The Call Bridge exchanges audio and video streams so that participants can see and hear each other. The Call Bridge license allows the Call Bridge to be used for media calls.

The following Call Bridges are configured:

Call Bridges	
ID	**Details**
da4004d7-9a3c-497d-8169-68d758ee41c8	Name: callBridges1
	Address: 10.5.1.1
	Sip Domain: lab.test

Call Bridges	
ID	**Details**
	Call Bridge Group: callBridgeGroups [f1a5244a-d055-4d21-b190-c7cf8561ae19]

9.2 Call Bridges Group

Deployments with Cisco Unified Communications Manager and clustered Meeting Servers can use the Call Bridge Grouping feature to load balance calls on the Meeting Servers. Load balancing aims to avoid overloading individual Meeting Servers in the cluster. Using Call Bridge groups, a Meeting Server cluster can intelligently load balance calls across the Call Bridges within the same location or across nodes in different locations. The intelligent decision making behind where calls end up is handled by the Meeting Servers.

The call control system needs to be able to handle SIP messages from the Meeting Servers, in order to move calls to the correct location. This functionality has been tested using Cisco Unified Communications Manager as a call control system, which is the only Cisco supported call control system for this functionality.

The following Call Bridge Groups are configured:

Call Bridge Groups		
ID	**Details**	
c5e26c0c-cae2-4145-8e11-c0558b7cb0ab	Name	callBridgeGroups2
	Load Balancing Enabled	false
	Load Balance Lync Calls	true
	Load Balance Outgoing Calls	false
	Load Balance User Calls	true
	Load Balance Indirect Calls	false
f1a5244a-d055-4d21-b190-c7cf8561ae19	Name	callBridgeGroups
	Load Balancing Enabled	true
	Load Balance Lync Calls	true
	Load Balance Outgoing Calls	false
	Load Balance User Calls	true
	Load Balance Indirect Calls	false

9.3 Call Settings

Use the Configuration > Call settings page to:

- Allow media encryption for SIP calls (including Lync).
- Specify whether participant label overlays are shown on SIP calls.
- Specify the preferred size (in milliseconds) for outgoing audio packets; 10ms, 20ms, or 40ms.
- Enable TIP support. (You need to enable TIP support if you use endpoints such as the Cisco CTS range.)
- Allow presentation video channel operations: if this is set to prohibited then no content channel video or BFCP capability will be advertised to the far end.
- BFCP mode for presentation video: if presentation video channel operations are allowed for SIP calls, this setting determines the Call Bridge's BFCP behavior, one of:
- Server role only: this is the normal option for a conferencing device and is intended for use with BFCP client mode devices (for instance, SIP endpoints). Or
- Server and client role: this option allows the Call Bridge to operate in either BFCP client or BFCP server mode in calls with remote devices.

This setting allows improved presentation video sharing with a remote conference hosting device.

- Set the value for the Resource-Priority header field in outgoing SIP calls. This setting tells the Meeting Server how much priority you will allow the bandwidth to allocate for presenting. This depends on the bandwidth capability of the network environment and other factors such as if there are any immersive systems that push HD, for example.
- Enable and disable UDP signaling for SIP. Set to one of:
- disabled|enabled: disable if you use SIP over TCP, or require that all of your network traffic is encrypted.
- enabled, single address mode corresponds to the SIP over UDP behavior.

- enabled, multi address if the Call Bridge is configured to listen on more than one interface.
- Enable Lync presence support. This setting determines whether or not this Call Bridge should supply information on destination URIs it serves to Lync presence subscribers.
- Leave the Lync packet pacing mode set to default.

The Call settings page also allows you to change the bandwidth settings for SIP, Cisco Meeting Server (CMA), Server reflexive, Relay, VPN, and Lync content. The settings are measured in bits per second, for example, 2000000 is 2Mbps. We dedicate at least 64kbps for audio, and recommend 2Mbps for a 720p30 call, or around 3.5Mbps for a 1080p30 call. More bandwidth would be required for 60fps.

You may need to change some of the bandwidth settings if you allow SIP media encryption, or enable TIP support, for example. In the case of 3 screen TIP calls, the bandwidth numbers seen on the Call settings page get automatically tripled, so you do not need to manually set them to 6Mbps for example. However, we would normally recommend (3x) 4Mbps for most CTS calls.

Call Configuration	
Call settings	
SIP media encryption	forbidden
Participant labels	disabled
Audio packet size preferred	20
SIP settings	
TIP (Telepresence Interoperability Protocol) calls	disabled
Presentation video channel operations	allowed
BFCP mode for presentation video	serverOnly
Resource priority	
UDP signaling for SIP	singleAddress
Lync presence support	enabled
Lync packet pacing mode	default
Bandwidth settings (SIP)	
Rx bandwidth	2000000
Tx bandwidth	2000000
Bandwidth settings (web app)	
Rx bandwidth	2000000
Tx bandwidth	2000000
Bandwidth settings (Server reflexive)	
Rx bandwidth	2000000
Tx bandwidth	2000000
Bandwidth settings (Relay)	
Rx bandwidth	1000000
Tx bandwidth	1000000
Bandwidth settings (VPN)	
Rx bandwidth	2000000
Tx bandwidth	2000000
Bandwidth settings (Lync content)	
LAN bandwidth limit	8000000
WAN bandwidth limit	2000000

9.4 Incoming Calls

When an incoming SIP call is routed to the Meeting Server, the Call Bridge first looks through the configured Inbound Dial Plan rules and then at the Call Forwarding rules.

This Incoming Calls chapter contains:

- Incoming Dial Plan rules to configure matching/rejection.
- Call Forwarding rules to configure forwarding behavior.

9.4.1 Incoming Dial Plan Rules

When an incoming SIP call is routed to the Meeting Server, the Call Bridge looks through the configured Inbound Dial Plan rules first and tries to match the "domain" part of the destination URI "<user>@<domain>" against those rules.

The following Incoming Dial Plan rules are configured:

Incoming Dialplan Rules	
ID	**Details**
bb7e2e37-5755-49bf-be2b-2eb0d971a6fb	Domain: lab.test Priority: 3 Tenant: tenant1 [e135fe4a-f019-42b4-a114-9e06e763d328] Resolve Toco Spaces: true Resolve To Ivrs: true Resolve To Lync Conferences: false Resolve To Lync Simplejoin: false
ff92f624-3b78-476e-a009-cf075e18bdd8	Domain: lab2.test Priority: 2 Tenant: Resolve Toco Spaces: true Resolve To Ivrs: true Resolve To Lync Conferences: false Resolve To Lync Simplejoin: false

9.4.2 Call Forwarding

If the domain part of the destination URI of an incoming SIP call fails to match any of the Incoming Dial Plan rules, the call will be handled according to the rules in the Call Forwarding Dial Plan rules. The rules decide whether to reject the call outright or to forward the call in bridge mode.

The following Call Forwarding rules are configured:

Incoming Dial Transforms	
ID	**Details**
ebc50191-335b-4b65-acf9-0ad4e9f88d70	Match Pattern: 12345 Priority: 4 Tenant: Action: forward Caller Id Mode: regenerate Uri Parameters: discard
1df341c8-a387-4a73-b40f-e7c775d8c3de	Match Pattern: 777777 Priority: 0 Tenant: tenant1 [e135fe4a-f019-42b4-a114-9e06e763d328] Action: reject Caller Id Mode: regenerate Uri Parameters: discard

9.5 Outbound Calls

When an outgoing SIP call is routed out of the Meeting Server, the Call Bridge looks first through the configured outbound dial plan rules and then at the dial transforms.

This Outbound Calls chapter contains:

- Outbound Dial Plan Rules
- Dial Transforms

9.5.1 Outbound Dial Plan Rules

The configuration of which trunks or proxies to use for outbound calls is based on the domain of the (SIP) destination being called, which is specified in the outgoing dial plan.

All rules added via the Web Admin Interface are global and applied to every Call Bridge in the cluster. You must use the API to specify the call routing for outbound SIP/Lync calls using a specific Call Bridge or Call Bridge group.

The following Outbound Dial Plan Rules are configured:

Outbound Dialplan Rules	
ID	**Details**
63cc21e1-f071-4654-9f14-48c119b78f64	Domain: lab2.test Priority: 3 Tenant: Local Contact Domain: Local From Domain: Trunk Type: sip Sip Control Encryption: auto Sip Proxy: Failure Action: stop Scope: global Call Bridge: Call Bridge Group: Call Routing: default
cf02a356-c613-4762-8f06-6bdac1364693	Domain: lab3.test Priority: 0 Tenant: tenant1 [e135fe4a-f019-42b4-a114-9e06e763d328] Local Contact Domain: Local From Domain: lab.test Trunk Type: sip Sip Control Encryption: auto Sip Proxy: Failure Action: stop Scope: global Call Bridge: callBridges1 [da4004d7-9a3c-497d-8169-68d758ee41c8] Call Bridge Group: callBridgeGroups [f1a5244a-d055-4d21-b190-c7cf8561ae19] Call Routing: default

9.5.2 Dial Transforms

When dial transforms are applied to all outbound calls, the Outbound Dial Plan Rules are applied to the transformed number.

You can use the Web Admin Interface Configuration > Outbound Calls page to control how dialed numbers are transformed. However, you need to use the API for Dial Transforms if you use Call Bridge clustering, because the shared coSpace database is a single configuration location for all Call Bridges.

There are three stages to the transform:

- A type is applied, which breaks the input number/string into components $1, $2 etc.
- The components are matched using regular expressions to see if the rule is valid
- An output string is created from the components according to the defined transform

The following Dial Transforms are configured:

Outbound Dial Transforms	
ID	**Details**

Outbound Dial Transforms	
ID	**Details**
0ee0e655-88d0-4433-ba00-c869f84d7e52	Type: raw Transform: 78.. Priority: 0 Action: accept
2c0f9c9a-1527-4f44-bbc9-f50ea34a61a1	Type: strip Transform: 78.. Priority: 0 Action: accept

9.6 IVR

Interactive Voice Response (IVR) is used to manually route to pre-configured calls. Incoming calls can be routed to the IVR where callers are greeted by a prerecorded voice message inviting them to enter the ID number of the call or space that they want to join. Video participants will see a welcome splash screen. After entering the ID, users are routed to the appropriate call or space, or prompted to enter a PIN if the call or space has one.

The following Interactive Voice Responses (IVRs) are configured:

IVR	
ID	**Details**
097e0e5d-c798-4225-86d2-94df1e16501d	Uri: http:/10.5.1.1/ivr.asxp Tenant: tenant1 [e135fe4a-f019-42b4-a114-9e06e763d328] Ivr Branding Profile: 4efb066f-c2f2-4f0d-93a9-da78962f391b Resolve Co Space Call Ids: true Resolve Lync Conference Ids: false
