Report Tool Info	
Report Tool version	12.0.17 / ?? June 2019
Report Tool License	Licensed [Prof all]

2 Overview

InformaCast Advanced Notification is a software solution developed by Singlewire Software that enables Cisco telephone systems and connected appliances to broadcast notifications via audio message and text message. InformaCast allows messaging an unlimited number of Cisco IP Phones, IP Speakers. Messages can be via text message, live audio, pre-recorded audio or text to speech audio.

The software manages lists of users who can send broadcasts, and devices to send broadcasts to. Users and devices can be sorted into groups depending on situations and who needs to see the message. Messages can be pre-built with text audio and images, or built when needed. Then with the press of a button, messages are sent to groups of users via SMS text, email, phone calls and on-premises devices such as desk phones, IP speakers, desktop computers and more for maximum reach.

Bell Ring Lists can be defined to perform paging operations at regular times throughout a day, and Bell Schedules can be defined to schedule on which days the Bell Ring Lists should be performed.

3 Messages Menu

The Messages section is for creating and managing messages that will be broadcast by InformaCast, scheduled broadcasts and shows confirmation statistics.

This section shows the following information:

- Send or Edit Messages
- Scheduled Broadcasts
- Confirmation statistics

3.1 Messages

The Messages section allows creating, editing and sending messages. Messages are the basis of any InformaCast broadcast. They can consist of text and/or audio, be live or prerecorded, can skip phones in use or not, and their delivery can be synchronized or as available.

Messages	
Name	Message Information

Messages		
Name	Message Information	
Basic Paging Live Broadcast	General	
	Description	Basic Paging Live Broadcast
	Short Text	
	Customizable	N
	Message Type	Live Audio
	Style	
	Audio	
	Delivery	Synchronized
	Activation Alert	
	Pre Tone	No Audio
	Post Tone	No Audio
	Wait Time	66
	Skip Phones in Use	Y

3.2 Scheduled Broadcasts

This section contains a list of scheduled broadcasts. Scheduled broadcasts allow arranging for an audio or text message to be sent at a prearranged time in the future, either once or on a recurring basis. Scheduled broadcasts can be added, edited and deleted here.

Scheduled Broadcasts		
Name	Information	
Scheduled Broadcast 1	Name	Scheduled Broadcast 1
	Message	Example Hammer
	Recipient Groups	(All Recipients)
	Schedule	Every Monday in January in 2020 at every minute
Scheduled Broadcast 2	Name	Scheduled Broadcast 2
	Message	Example Monthly Meeting
	Recipient Groups	(All Recipients)
	Schedule	Jul 24, 2019 at 9:08:00 AM

4 Recipients Menu

Messages are sent to recipients that can be organized into groups. Recipient groups, and exclusionary recipient groups, allow to organize recipients into groups that will either receive the broadcasts sent to them (recipient groups) or never receive broadcasts (exclusionary recipient groups). Furthermore tags can be created and assigned to different groups to make it easier to choose groups for a broadcast.

In this section you will find:

- Recipient Groups
- Tags

4.1 Recipient Groups

Recipient groups and exclusionary recipient groups allow you to organize your recipients into groups that will either receive the broadcasts sent to them (recipient groups) or never receive broadcasts (exclusionary recipient groups).

By default, InformaCast initially creates an 'All Recipients' group, which contains all the recipients that can be discovered. However, you may find it helpful to send to smaller groups of recipients (or exclude some recipients from ever receiving broadcasts).

Recipient Groups					
Name	Recipient Information				
(All Recipients)	General

	Num Phones: 0
	Num Speakers: 0
	Num Plugins: 0

4.2 Tags

Recipient group tags allow finer control over the display results for recipient groups. Before recipient groups can be filtered through tags, these need to be defined.

The following table lists the configured tag names and their recipient group members:

Recipients > Tags	
Name	Tag Members
New Tag	
tag1	Recipient Group 2 Recipient Group 3
tag2	Recipient Group 2 Recipient Group 3

5 Speakers Menu

'IP speakers' are the end-points where the messages are broadcast from. They can include:

- Hardware IP speakers, e.g. network-attached loudspeakers, including SIP speakers for full-duplex intercom calls
- Hybrid devices
- Legacy Paging Interface (LPI) plugin paging zones
- Computers running the InformaCast Desktop Notifier
- The Singlewire Desktop Notification System, an application retired in favor of the InformaCast Desktop Notifier but still supported

This section includes:

- IP Speakers list

5.1 IP Speakers

'IP speakers' are the end-points where the messages are broadcast from.

This section includes the list of IP Speakers with their registration status and more info.

IP Speakers

6 Bells Menu

Bell schedules are a means to send patterns of scheduled messages (usually brief tones) to IP phones and IP speakers. Ring Lists specify a series of ring tones to be played at specific times of day and associate each tone with a set of recipient groups to which it will be played. The Bell Schedule specifies the Ring List to be used each day by mapping a repeating weekly pattern onto the calendar.

This section shows:

- Ring Lists
- Bell Schedules

6.1 Bell Ring Lists

Ring lists specify a series of ring tones to be played at specific times of day and the set of recipient groups that will receive each broadcast.

Bell RingLists			
Name	Information		
Ring List 1	Name	Ring List 1	
	id	2147483658

recipientGroupIds	-1			
RecipientGroups	(All Recipients)			

6.2 Bell Schedules

Bell Schedules control the ring lists that are used on specific calendar dates. Once Ring Lists are created, Bell Schedules set which days of the week the Ring Lists are played on. Exceptions can be set and appear here.

Bell Schedules			
Name	Information		
Bell Schedule 1	Name	Bell Schedule 1

7 Admin Menu

The Admin section provides access to the InformaCast application settings and configurations.

This section contains:

- Overview
- Licensing
- Telephony
- Voice
- Network Parameters
- Broadcast Parameters
- Desktop Parameters
- System Menus
- DialCast Menus
- SIP Menus

7.1 Overview

InformaCast configuration overview page.

Admin Overview	
InformaCast Server	
InformaCast Component Version	12.5.1 - 194 Advanced Notification Trial license
JTAPI Version	Cisco Jtapi version 8.6(2.24091)-1 Release
Start Time (local)	Wednesday, 10 July 2019 14:03:59
Current Time (local)	Wednesday, 24 July 2019 10:34:30
Application Mode	Stand-alone
SLP	
SLP Enabled	12.5.1 - 194 Advanced Notification Trial license
Publish Speaker Configuration URL	False
Publish SOAP API	True
Cisco Unified Communications Manager	
Default configuration	Version:

CTI Ports	
CTI Route Points	
SIP User Agent Status	
User Agent Status	User Agent is running
SIP Calls	
Speakers	
Number of Speakers Configured	3
Number of Speakers Registered	0
Number of Licensed Speakers	5
Backup	
Backup Activated	3
Next Scheduled Backup	0
LDAP Integration	
LDAP Authentication Enabled	True
LDAP Grouping Enabled	True
Next Scheduled LDAP Phone Update (local)	Wednesday, 24 July 2019 10:40:00
Phone Updates	
Last Attempted Phone Rebuild (local)	Wednesday, 24 July 2019 10:10:00
Last Successful Phone Rebuild (local)	Monday, 1 January 0001 00:00:00
Last Attempted Phone Refresh (local)	never
Last Successful Phone Refresh (local)	never
Number of Phones Retrieved	0
Number of Phones Used / Licensed	0 / 500
Next Phone Rebuild (local)	Wednesday, 24 July 2019 11:10:00
Phone Refresh Interval (minutes)	0
Multicast Ports	
Number of Multicast Ports Configured	301
Number of Multicast Ports Used by Audio Broadcasts	0
Number of Multicast Ports Used by Talk and Listen Messages	1
Number of Multicast Ports Unused	300

7.2 Licensing

InformaCast License Key information

In the context of Cisco Unified Communications Manager, 2 different licenses are available: Basic Paging supplied through an OEM agreement with Cisco, and this can be upgraded to the Advanced Notification package.

	Basic Paging	Advanced Notification
Live Audio Paging to Cisco IP Phones	✓ 50 Phones	✓ Unlimited
Powerful Emergency Notification System		✓
Integration to Existing Overhead Paging (Not available in Trial)		✓
Text and Audio to Cisco IP Phones and Other Endpoints		✓
Support for IP Speakers		✓
911 (Emergency) Call Alerting Recording (Not Available in Trial)		✓
Automatic Weather Notification		✓
Dynamic Conference Call		✓
Message Confirmation		✓
Pre-Recorded and Scheduled Broadcasts (Bell/Shift Scheduler)		✓
Notification to Computers and Social Media		✓
Reach Mobile/Remote Users		✓

Licensing

Overview

Application	InformaCast
Licensee	Contact Singlewire at sales@singlewire.com or +1.608.661.1140, option 1 to upgrade to a permanent advanced notification license.
License Manager URL	http://10.5.1.155:8101/LicenseManager
License Manager Available	True
Server IP Address	Not restricted
License Terms	
License Mode	Advanced Notification Trial
in TrialMode	True
Expiration	License Expiration: Sep 8, 2019
Server IPAddress	Not restricted
in Grace Period	False
Grace Expiration	N/A
Feature Codes	Audio MessageConfirmation
Application Parameters	
Hours Of Use	1440
Max Bell Schedules	10
Max IP Speakers	5
Max Phones	500
Max Version	12.6

7.3 Telephony

The Telephony section provides access to settings for Cisco Unified Communication Manager clusters, phone lists, external call control and LDAP phone lists.

In this section you will find:

- CUCM Clusters
- CUCM Phone Updates
- External Call Control
- LDAP Phone Updates

7.3.1 CUCM Clusters

List of Cisco Unified Communications Manager clusters whose phones will receive InformaCast broadcasts

CUCM Clusters		
Name	Information	
Default configuration	CUCM Cluster Settings	
	Name	Default configuration
	Primary CUCM Cluster	Y
	CUCM Application User	APPLICATION_USER
	Use Application User for AXL	N
	AXL User Name	AXL_USER
	AXL IP Address(es)	127.0.1.1
	CUCM IP Address(es)	127.0.0.1
	SNMP Settings	
	SNMP Version	SNMP Version 2
	SNMP v2 Community Name	*****

7.3.2 CUCM Phone Updates

This section defines on what schedule InformaCast will build a list of registered phones, and how often it will refresh that list.

CUCM Phone Updates

Job Description	Phone Data Update
Second	0
Minute	10
Hour	Every
Month	Every
Day of Month	Every
Week Day	Every
updateInterval	0

7.3.3 External Call Control

These are the Web Service URLs required when InformaCast is being used to provide external call control for Cisco Unified Communication Manager.

CUCM External Call Control	
Web Services URLs	
Primary	http://10.5.1.155:8081/InformaCast/admin?cmd=callRouting&token=wh4a1envea
Secondary	
Secure Web Services URLs	
Primary	https://IC155.lab.test:8444/InformaCast/admin?cmd=secureCallRouting&token=wh4a1envea
Secondary	

7.3.4 LDAP Phone Updates

This section defines on what schedule InformaCast will build a list of LDAP phones.

LDAP Phone Updates	
Job Description	LDAP Phone Update
Second	0
Minute	40
Hour	Every
Month	Every
Day of Month	Every
Week Day	Every

7.4 Voice Menus

Anytime a user picks up a phone to make a broadcast containing audio or to use the InformaCast DialCast functionality, they will come in contact with the Interactive Voice Response (IVR). This set of menus is customizable through this Voice section of the Admin menu. InformaCast voice menus can be modified as well as the tones/audio associated with them:

- General Voice Menu
- Inbound Call Voice Menu
- Broadcast Voice Menu

7.4.1 General

The general voice menu governs InformaCast's behavior during live broadcasts and audio recording. Stall tones and Go tones can be set, as well as the 'No Active Recipients' audio message. The recording Prompt audio message can be set, and the Accept key and the Cancel key configured.

Voice > General	
--- Live Broadcast Parameters ---	
Stall Tone Audio	
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/General/Audio/stallTone
Audio File Duration [ms]	239
Stall Tone	2

Interval (seconds)	
Go Tone Audio	
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/General/Audio/goTone
Audio File Duration [ms]	915
No Active Recipients Audio	
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/General/Audio/noActiveRecipients
Audio File Duration [ms]	5672
Recording Parameters	
--- Recording Prompt Audio ---	
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/General/Audio/recordingPrompt
Audio File Duration [ms]	10024
Accept Key	#
Cancel Key	*

7.4.2 Voice Inbound

The Inbound Call voice menu determines the tones and audio files used when InformaCast handles incoming calls, and shows authentication parameters.

Voice > Inbound Call Voice Menu	
Invalid License Audio	
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Inbound/Audio/invalidLicense
Audio File Duration [ms]	6275
Call Answered Greeting Audio	
Enable Greeting	Y
Enable Break Key	Y
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Inbound/Audio/systemGreeting
Audio File Duration [ms]	3493
DN Not Recognized Audio	
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Inbound/Audio/dnNotConfigured
Audio File Duration [ms]	6139
--- Authentication Parameters ---	
Credential Input Method	1
Fixed-Length Input Length	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Inbound/Audio/authSuccess
Variable-Length Input Termination Key	#
Maximum Failures Allowed	3
Maximum Prompts Allowed	3
Greeting Audio	
Enable Greeting	Y
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Inbound/Audio/authGreeting
Audio File Duration [ms]	4126
Login Prompt Audio	
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Inbound/Audio/authLogin
Audio File	2237

Duration [ms]	
Password Prompt Audio	
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Inbound/Audio/authPassword
Audio File Duration [ms]	1470
Failure Audio	
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Inbound/Audio/authFailed
Audio File Duration [ms]	3567
Success Audio	
Enabled	Y
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Inbound/Audio/authSuccess
Audio File Duration [ms]	1848
PIN Prompt Audio	
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Inbound/Audio/authPin
Audio File Duration [ms]	2690
DTMF Parameters	
Timeout (seconds)	0
Inter-Digit Timeout (seconds)	0
Break Key	#

7.4.3 Broadcast

The broadcast voice menu determines the audio files used by InformaCast when triggering broadcasts prompted by incoming calls. They include the audio messages for success or failure of the broadcast and broadcast cancel operations.

Broadcast Voice Menu	
--- Send Broadcast Audio ---	
Success Audio	
Enable Success Audio	Y
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Broadcast/Audio/success
Audio File Duration [ms]	2170
Failure Audio	
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Broadcast/Audio/fail
Audio File Duration [ms]	2753
Missing Broadcast Component Audio	
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Broadcast/Audio/missingComponent
Audio File Duration [ms]	7035
--- Cancel Broadcasts Audio ---	
Success Audio	
Enable Broadcasts Audio	Y
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Broadcast/Audio/cancelBroadcastsSuccess
Audio File Duration [ms]	3001
Failure Audio	
Audio File	https://10.5.1.155:8444/InformaCast/RESTServices/V1/Admin/Voice/Broadcast/Audio/fail

Audio File	2753
Duration [ms]	

7.5 Network Parameters

This section shows network configuration parameters for InformaCast.

The section includes:

- Session Timeouts
- SLP Parameters
- Speaker Parameters
- SIP Speaker Parameters

7.5.1 Session Timeouts

Session timeout values, which affect how often credentials must be provided when using InformaCast.

Session Timeouts	
General Session Timeout (seconds)	300
Phone Session Timeout (seconds):	60

7.5.2 SLP Parameters

SLP (Service Location Protocol) parameters, which affect interactions between InformaCast and IP speakers, as well as between InformaCast and other applications.

SLP Parameters	
Enable SLP	Y
Publish Configuration File Service	N
Publish SOAP Service	Y
SLP Scope	Berbee Applications
URL of Configuration File Server	http://10.5.1.155:8081/InformaCast/resources

7.5.3 Speaker Parameters

This section covers IP Speaker automatic registration parameters. InformaCast sees several different endpoint types as "IP speakers," including hardware IP speakers, computers running the InformaCast Desktop Notifier (IDN, formerly the Singlewire Desktop Notification System), hybrid devices, and Legacy Paging Interface (LPI) plugin paging zones.

Speaker Parameters	
Automatically Add Hardware IP Speakers	N
Automatically Added Hardware IP Speaker Volume	10
Automatically Add IDN Instances and LPI Plugin Paging Zones	N
Automatically Added IDN Instances and LPI Plugin Paging Zones Volume	10
Automatically Remove Unregistered IDN Instances (days)	0
Registration Interval (seconds)	300
Capture Keepalive Interval (seconds)	2

7.5.4 SIP Speaker Parameters

Network settings for SIP Speakers.

SIP Speaker Parameters	
Telephony Providers	127.0.0.1
SIP Transport Protocol	TCP
SIP OPTIONS Ping Interval (seconds)	60
SIP Registration Interval (seconds)	60
Call Ring Time (seconds)	15

7.6 Broadcast Parameters

Shows whether InformaCast uses JTAPI or HTTP when communicating with your Unified Communications Manager, and shows preferences for InformaCast's handling of the audio parameters for IP phones, IP speakers, computers running the InformaCast Desktop Notifier etc., as well as the phone vibration and backlight display period for Cisco IP phones, several queued ad-hoc broadcast parameters, and the DN and authentication method for canceling broadcasts over the phone.

Broadcast Parameters	
Send Commands to Phones by JTAPI	N
JTAPI Static Terminals Enabled	N
Starting Multicast IP Address	239.0.1.2
Ending Multicast IP Address	239.0.1.2
Multicast TTL	16
Enable Message Blending	Y
Number of Priority Levels	3
Broadcast History Retention Period	7
Recording Limit	300
Live Broadcast Limit	300
Enable Phone Vibration	N
Queued Broadcast Maximum Wait Time	60
Queued Broadcast Retry Interval	10
Queued Broadcast Send Threshold	75
Queued Broadcast Maximum Wait Time	60
Send Silence with DialCast IVR	N
Cancel Broadcasts Directory Number:	
Cancel Broadcasts Authentication Method	None

7.7 Desktop Parameters

Shows access status to several commands available in the InformaCast Desktop Notifier menu: Clear, Exit, and Start/Stop Broadcasts. Also shows if the Singlewire logo appears by default in the Broadcast window or if a custom logo has been provided to show in its place.

Desktop Parameters	
Clear Menu Option	allow
Exit Menu Option	allow
Start/Stop Broadcasts Menu Option	allow
Logo	A 24.0kB logo is present: logo.png
Logo Image	

7.8 System Menus

This section shows InformaCast system configuration parameters and includes settings for:

- Backup
- Scripting
- Reporting
- LDAP Integration

Version 12 and later:

- Call Detail Records
- Server Certificate
- Client Certificates
- SSL Parameters
- Client Certificates
- Login Banners

7.8.1 Backup

Shows whether scheduled backup jobs are activated, and what schedule they follow.

System > Backup	
Job Description	InformaCast Data Backup
Backup functionality activated	N
Second	0
Minute	0
Hour	3

7.8.2 Scripting

InformaCast's system scripting functionality allows uploading scripts that are triggered when certain events take place. This section shows the 5 predefined events, and the script for each one if present.

System > Scripting		
Name	Information	
GroupCacheRebuilt	Name	GroupCacheRebuilt
	description	Recipient Group Cache Rebuilt
	Script	<pre>// A script that can be used for sending email notifications // upon the completion of the recipient group update // Function to add a recipient to a message's "to" list function addToRecipient(message, recipient) { var to = new javax.mail.internet.InternetAddress(recipient); message.addRecipient(javax.mail.Message.RecipientType.TO, to); } if ((cacheUpdateInfo.newDeviceCount == 0 && cacheUpdateInfo.oldDeviceCount != 0) (cacheUpdateInfo.exception != null)) { // Email notifications are sent only if the recipient group cache // gets empty after finishing the update or if an exception occurs // in the course of update var props = new java.util.Properties(); props.put("mail.smtp.host", "mailserver.mycompany.com"); var session = javax.mail.Session.getInstance(props, null); // Set up the basic envelope information, sender and recipients var message = new javax.mail.internet.MimeMessage(session); var from = new javax.mail.internet.InternetAddress("example_email@singlewire.com"); message.setFrom(from); addToRecipient(message, "john.doe@mycompany.com"); addToRecipient(message, "jane.doe@mycompany.com"); message.setSubject("Recipient Group Cache Rebuilt"); var text = 'Devices in the cache before update: ' + cacheUpdateInfo.oldDeviceCount + '\n'; text += 'Devices in the cache after update: ' + cacheUpdateInfo.newDeviceCount + '\n'; if (cacheUpdateInfo.exception == null) { text += "\nNo exceptions were thrown"; } else { text += "\nThe following exception was thrown:\n"; var stackTrace = new java.io.StringWriter(); cacheUpdateInfo.exception.printStackTrace(new java.io.PrintWriter(stackTrace)); text += stackTrace.toString(); } // Wrap the text as a MIME body part var part = new javax.mail.internet.MimeBodyPart(); part.setContent(text, "text/plain"); // Set up the multipart content of the message, // using the only text part</pre>

System > Scripting							
Name	Information						
	<pre> var content = new javax.mail.internet.MimeMultipart(); content.addBodyPart(part); // Assemble and send the message message.setContent(content); javax.mail.Transport.send(message); } </pre>						
BackupCompleted	<table border="1"> <thead> <tr> <th>Name</th> <th>BackupCompleted</th> </tr> </thead> <tbody> <tr> <td>description</td> <td>Backup Completed</td> </tr> <tr> <td>Script</td> <td> <pre> // Function to a recipient to a message's "to" list function addToRecipient(message, recipient) { var to = new javax.mail.internet.InternetAddress(recipient); message.addRecipient(javax.mail.Message.RecipientType.TO, to); } var props = new java.util.Properties(); props.put("mail.smtp.host", "mailserver.mycompany.com"); var session = javax.mail.Session.getInstance(props, null); // Set up the basic envelope information, sender and recipients var message = new javax.mail.internet.MimeMessage(session); var from = new javax.mail.internet.InternetAddress("example_email@singlewire.com"); message.setFrom(from); addToRecipient(message, "john.doe@company.com"); addToRecipient(message, "jane.doe@company.com"); message.setSubject("InformaCast Message Sent"); var text = 'Message "' + messageInfo.description + '" [key: ' + text += messageInfo.messageKey + '] was sent by ' + text += senderInfo.userName + " [id: " + senderInfo.user + "]\n"; text += "Sent from address " + senderInfo.address + "\n"; text += "Sending Device Type: " + senderInfo.deviceType + "\n"; text += "Sending Device Name: " + senderInfo.deviceName + "\n"; text += "Sending Device Description: " + senderInfo.deviceDescription + "\n\n"; text += "Sent to recipients: " + messageInfo.recipientDescription + " [keys: "; text += messageInfo.recipientKeys.join(", ") + "]\n\n"; text += "Message type: " + messageType.getDescription() + "\n"; if (messageType.isLive()) { text += "Live Audio Source: " + senderInfo.liveAudioSource + "\n"; } if (messageType.isText()) { text += 'Message Short Text: "' + messageInfo.shortText + '"\n'; } // Wrap the text as a MIME body part so we can also include a captured image. var part = new javax.mail.internet.MimeBodyPart(); part.setContent(text, "text/plain"); // Set up the multipart content of the message, starting with the text part. var content = new javax.mail.internet.MimeMultipart(); content.addBodyPart(part); // Include the latest captured image if one exists var capture = new java.io.File("/tmp/capture.jpg"); if (capture.canRead()) { part = new javax.mail.internet.MimeBodyPart(); part.attachFile(capture); content.addBodyPart(part); } // Assemble and send the message </pre> </td> </tr> </tbody> </table>	Name	BackupCompleted	description	Backup Completed	Script	<pre> // Function to a recipient to a message's "to" list function addToRecipient(message, recipient) { var to = new javax.mail.internet.InternetAddress(recipient); message.addRecipient(javax.mail.Message.RecipientType.TO, to); } var props = new java.util.Properties(); props.put("mail.smtp.host", "mailserver.mycompany.com"); var session = javax.mail.Session.getInstance(props, null); // Set up the basic envelope information, sender and recipients var message = new javax.mail.internet.MimeMessage(session); var from = new javax.mail.internet.InternetAddress("example_email@singlewire.com"); message.setFrom(from); addToRecipient(message, "john.doe@company.com"); addToRecipient(message, "jane.doe@company.com"); message.setSubject("InformaCast Message Sent"); var text = 'Message "' + messageInfo.description + '" [key: ' + text += messageInfo.messageKey + '] was sent by ' + text += senderInfo.userName + " [id: " + senderInfo.user + "]\n"; text += "Sent from address " + senderInfo.address + "\n"; text += "Sending Device Type: " + senderInfo.deviceType + "\n"; text += "Sending Device Name: " + senderInfo.deviceName + "\n"; text += "Sending Device Description: " + senderInfo.deviceDescription + "\n\n"; text += "Sent to recipients: " + messageInfo.recipientDescription + " [keys: "; text += messageInfo.recipientKeys.join(", ") + "]\n\n"; text += "Message type: " + messageType.getDescription() + "\n"; if (messageType.isLive()) { text += "Live Audio Source: " + senderInfo.liveAudioSource + "\n"; } if (messageType.isText()) { text += 'Message Short Text: "' + messageInfo.shortText + '"\n'; } // Wrap the text as a MIME body part so we can also include a captured image. var part = new javax.mail.internet.MimeBodyPart(); part.setContent(text, "text/plain"); // Set up the multipart content of the message, starting with the text part. var content = new javax.mail.internet.MimeMultipart(); content.addBodyPart(part); // Include the latest captured image if one exists var capture = new java.io.File("/tmp/capture.jpg"); if (capture.canRead()) { part = new javax.mail.internet.MimeBodyPart(); part.attachFile(capture); content.addBodyPart(part); } // Assemble and send the message </pre>

7.8.3 LDAP Integration

Shows parameters for LDAP integration of InformaCast, including General, Authentication and Grouping parameters.

System > LDAP Integration		
Name	Information	
LDAP General	Use Automatic Service Discovery	N
	LDAP Host Name	10.5.1.166
	LDAP Port	389
	Use SSL	N
	Authentication Method	Simple
	LDAP Administrator Distinguished Name	
	Schema Type	OpenDS
	Enable Authenticating Users Via LDAP	Y
	Enable Grouping Recipients via LDAP:	Y
Authentication	Enable Authenticating Users Via LDAP	LDAP
	Search Base Distinguished Name	DC=lab,DC=test
	Valid User Filter	(sn=*)
	Valid User Group Filter	
	Maximum Number of Users	1000
Grouping	Phone Extension Attribute	ipphone

7.8.4 Call Detail Records

This section shows whether InformaCast is configured to write Call Detail Records, and the record retention period.

Call Detail Records	
Write Call Detail Records	Y
Call Detail Records Retention Period	1

7.8.5 Server Certificate

Shows the InformaCast server certificate. Clients (e.g. browsers) use this certificate when establishing secure connections with the InformaCast server.

Server Certificate

7.8.7 SSL Parameters

This section shows SSL parameters, and how InformaCast should behave with untrusted certificates.

Admin > System > SSL_Parameters	
Automatically import untrusted certificates	Y

7.8.8 Login Banners

Shows the text that should be displayed before and after user authentication.

Admin > System > Login Banners	
na	API for Login Banner does not exist but will be added later according to InformaCast

7.9 DialCast Menus

These are the DialCast parameters. DialCast allows a user to dial a SIP number configured with a dialing pattern that determines which InformaCast message should be sent and which recipient groups should receive it.

The section shows:

- Dialing Configurations
- SIP Phone Exceptions

7.9.1 Dialing Configurations

This is the list of Dialing Configurations for the DialCast system. InformaCast uses these dialing configurations to trigger broadcasts by matching the called DN to a dialing pattern and then initiating a broadcast that uses the configuration's message and recipients.

Dialing Configurations		
Name	Dialing Configurations Information	
77771	Dialing Pattern	77771
	Authentication Method	
	Authentication Type	PIN
	PIN	*****
	Message to Broadcast	
	Message Description	Message Desc

Dialing Configurations

Greeting	Disable Greeting																		
Enable break key	N																		

7.10 SIP Menus

This section provides the parameters for SIP access to InformaCast. In order to use DialCasts and the Legacy Paging Interface plugin, or make full-duplex intercom calls, you must first configure Session Initiation Protocol (SIP), which is supported by a growing number of PBXs and telephony devices, and provides InformaCast with the capability to receive SIP calls, allowing other SIP devices (in this case, Unified Communications Manager) to locate and call InformaCast.

Here you will find settings for:

- SIP Access
- SIP Call Security
- SIP User Credentials
- SIP Certificates

- SIP Stack

7.10.1 SIP Access

This section shows whether SIP access is allowed or denied, and a list of exceptions that can be configured by subnet or host.

SIP Access		
Incoming SIP calls	Allow	
Subnet Exceptions	SIP Access	
	1.1.1.0/24	Deny
	1.1.2.0/24	Deny

7.10.2 SIP Call Security

This section shows the security parameters for SIP calls to InformaCast.

SIP Call Security	
Secure Signaling Required	N
Secure RTP Allowed	N
Authenticate Incoming Requests	N
Realm	InformaCast
Authentication Username	sipuser
Nonce Duration	5

7.10.3 SIP User Credentials

Shows a list of credentials used by InformaCast when authenticating with other SIP servers.

SIP User Credentials	
User	Realm
user2	realm2
user1	realmxx

7.10.4 SIP Certificates

Certificates used when establishing secure SIP connections between InformaCast and other SIP devices.

SIP Certificates	
Name	Information
informacast	<p>[0] Version: 3 SerialNumber: 72319898 IssuerDN: CN=InformaCast-10.5.1.155 Start Date: Wed Jul 10 07:03:34 CDT 2019 Final Date: Sat Nov 24 06:03:34 CST 2046 SubjectDN: CN=InformaCast-10.5.1.155 Public Key: RSA Public Key modulus: cb85d3ded20ea82c6239dcfae6628eada20a630e6b998e4c13b6fd5d2c0c187575e5202375aa66d8cf28fa4fa462a32fa5fd89f8cc03a4ec1733216a2b14e0f8b869a421bbffeca2d1de5665deae94280917a74cb6493d660eadb8ef1ef188857b231d73b77a1045db83b2eedde13b3c5a8361b394cc7ea998c0c37f7f081282540f5f7b0d44b68dff75343ecac8ad41ce14ebba7fc90c5e0c31902bdba74e16f91776994db2ae839dc445219d7a1d0c87de00f1b0feb31b57c55a15a9d1135d1ed269bdc6f923f5f2d7c87a1fd22eeb736c949829ad342feb9dd75ab337e08c6623fd3a977bbc192536abfa6a6f86ff745127f45c46582054431c589642eb public exponent: 10001</p> <p>Signature Algorithm: SHA256WITHRSA Signature: 202d74d8518b49be4903433fea2d3b3022b53f7737726d0330fc3faa5356212d740ceee2aa075a38d4e4b521ca36e093d0467a40ca1414fa3a4216300f52afa23c7f8e7783954bdccd0b1c31cf989e49817952a47bd1b006967a95adc9b878417e5b33ab462f54ea86cbb6425af0fdf571845f32d54b3667e32a2575febb2f371bcaf7125a8f452e5daec14a</p>

7.10.5 SIP Stack

Various low/level parameters for the SIP stack. InformaCast uses the National Institute of Standards and Technology (NIST) SIP stack to provide it with basic SIP functionality. The SIP stack provides InformaCast with fundamental low-level SIP functionality such as transaction handling, dialogs, utilities for SIP headers, maintenance of SIP timers, etc.

SIP Speaker Parameters	
Enable Detailed Logging	N
Max Forwards	70
Read Timeout	1000
Cache Client Connections	Y
Cache Server Connections	Y

7.11 Users Menus

InformaCast maintains a user list that allows setting different roles to different Users and User Groups. The user administration section is for managing the lists of roles, users and groups.

The section includes:

- Roles
- Users
- Groups

7.11.1 Roles

Roles are broad, predefined sets of capabilities. For example, there could be one role that only allows a user to send messages and another role that allows a user to create, send, and cancel messages. All roles are predefined, and editing a role simply consists of adding or removing groups assigned to the role.

This section shows a list of the predefined roles. Each role shows which users or groups are assigned to it.

Roles		
Name	Role Info	
appAdmin	General	
	Description	Permitted to modify application configuration settings.
